

Colostrum and Lactoferrin by Liposomal Technology

Bovine colostrum is an important food supplement to develop and support the immune system defenses.

It naturally contains :

- Immunoglobulins: IgG, IgA and IgM
- Enzymes: Lysozyme
- Cytokines: Interleukins and Interferon gamma (IFN- γ)
- Growth factors : Tgf-A and B, Igf-1 and 2

Lactoferrin is a glycoprotein known for its ability to transport Iron and it has antimicrobial, antiviral and antioxidant properties.

○ Why Colostrum in Liposomes?

Lysozymes and other precious components are preserved from the proteolytic hydrolysis in the bowel.

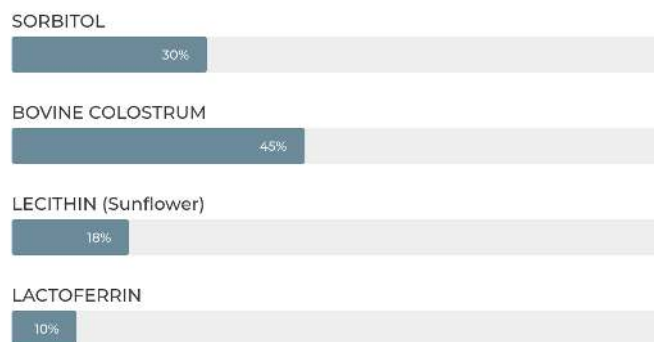

○ Why Lactoferrin in Liposomes?

Due to its nature, Lactoferrin, is unstable and is particularly sensitive to the proteolytic activity of pepsin in the gastric tract and to proteolytic hydrolysis in the bowel. This causes the protein denaturation, poor absorption and its inactivation.

PROPRIETIES

- Appearance fine powder
- Good taste
- Solvent free
- GMO free
- Origin controlled and guarantee

COMPOSITION

APPLICATIONS:

-Nutraceutical solid forms – Bottles - Sachet
